I-TECH MEDICAL DIVISION

I-Tech Medical Division is a registered trademark of I.A.C.E.R. Srl, a highly professional company operating in the medical devices market both for home and professional use.

I.A.C.E.R. Srl invests in technological research to develop medical devices satisfying both health demands and improvement in quality of life. I-Tech Medical Division represents a definitive benchmark for end users and professional users. I.A.C.E.R. medical devices are distributed by the best resellers of electromedical devices.

WARNING: our medical devices have to be intended as a useful instrument for physical therapy, and can never substitute the precious role of your GP. We advise our customer to consult their GP before and after the treatments.

TENS ELECTROTHERAPY (pain therapy)

TENS is one of the most used pain relief electro-therapy technique in physiotherapy. It can be used for the treatment of a wide range of physical pains, such as acute pain, chronic, muscular pain, post-clinical pain and pregnancy pain. Depending on its main action, TENS impulse can be classified as follow:

- **Rapid (conventional) TENS:** current used to act on pain symptoms. Its purpose is to induce the organism into blocking pain at the spine. Treatment duration should be no less than 30/40 minutes. Conventional tens is a current that can be used to treat general everyday pain. The average number required to benefit from the treatment is 10/12 per day.
- **Endorphinic TENS:** it promotes the endogenous production of morphine-like substances capable of raising the pain perception threshold. Treatment duration 20/30 minutes in a single phase, daily frequency. Antalgic action shows up 2 hours after the treatment.
- **Sequential TENS:** it's like conventional TENS, but during stimulation, this program modifies by itself the frequency and impulse width.
- **TENS at maximum values:** very short duration, just few minutes. It blocks pain impulses peripherally, creating a proper anaesthetising effect in the treated area. This type of stimulation is suitable for injuries or bruises when a rapid action is required.
- **TENS Burst:** it's a mix of low frequency (endorphinic) and high frequency (rapid) TENS.

EMS ELECTROTHERAPY (rehab, sport, beauty, fitness)

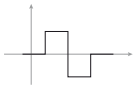
EMS means Electrical Muscular Stimulation: it's a technique that helps muscular contractions using electrical impulses. EMS is commonly used in medical therapy and as a complementary aid in sport activity, with both therapeutic and sport or beauty purposes (toning, draining).
In physiotherapy EMS is used for rehabilitation purposes, for example in atrophy muscular prevention for people with deambulation problems, post-operated, post-traumatized, disabled.
Mio Care Tens model includes 2 EMS programs (atrophy prevention and atrophy).
Mio Care Beauty and Mio Care Fitness are more suggested for muscular stimulation treatment.

MIO-CARE | TENS

8 019781 471109

20 PROGRAMS
more than 300 applications

Ideal if you want pain relief or to resolve pain linked problems, but do not need any firming or muscular toning actions that an athlete might need.



MAIN FEATURES:
- 2 independent channels
- Compensated biphasic square wave
- Digital keyboard
- Maximum intensity 200 mApp
- Backlight display
- Belt clip
- Internal Ni-Mh rechargeable battery pack with new LL technology (long lasting)
- CE0476 medical device

programs

01-Tens conventional (rapid)	11-Atrophy prevention
02-Tens endorphinc (delayed)	12-Atrophy (trophism rehabilitation)
03-Tens maximum values	13-Hand and wrist pain
04-Inflammatory	14-Plantar stimulation
05-Neck pain/cervicogenic headache	15-Epicondylitis

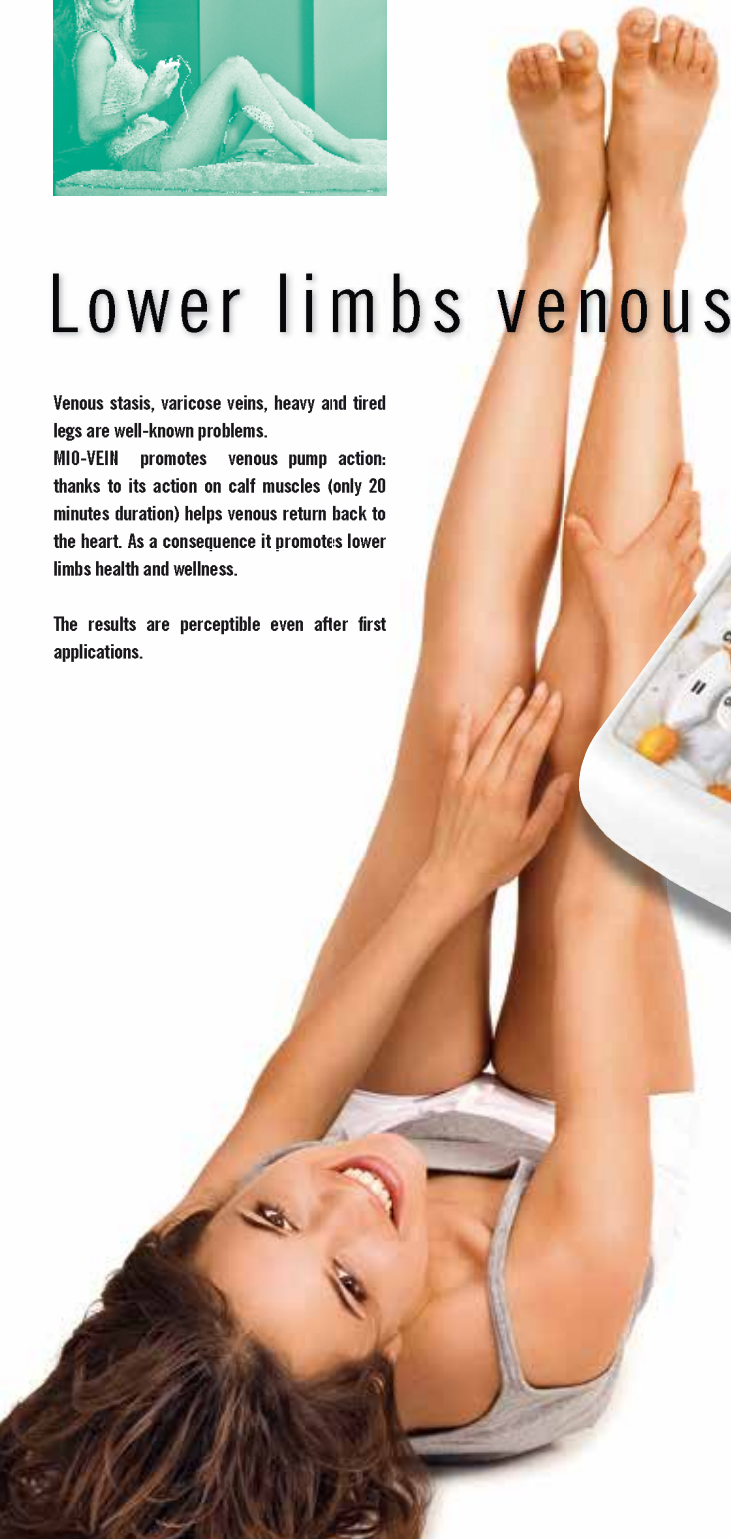
Lower limbs venous diseases?

Venous stasis, varicose veins, heavy and tired legs are well-known problems.
MIO-VEIN promotes venous pump action: thanks to its action on calf muscles (only 20 minutes duration) helps venous return back to the heart. As a consequence it promotes lower limbs health and wellness.

The results are perceptible even after first applications.



Terapia domiciliare

Mio-Vein is a medical device CE0476 certificated. Please read user manual instructions before using the device.

Aut. Min. Rich.

MIO-VEIN

VENOUS STIMULATION

Mio-Vein is particularly indicated for all people suffering from venous diseases or in all situations that represent potentially risk factors for venous problems.
Mio-Vein helps the correct venous circulation and consequently it promotes healthy and beauty legs.

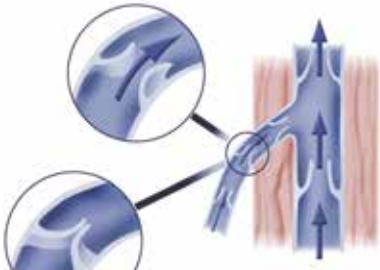
MAIN FEATURES:
- Combined electrotherapy unit with 2 independent channels
- Compensated biphasic square wave
- Digital keyboard
- 120 mApp maximum intensity
- Internal Ni-Mh rechargeable battery pack with new LL technology (long lasting)
- Backlight display
- Belt clip
- Medical device CE0476

Venous stasis: a social disease

Venous stasis refers to loss of proper function of the veins that would normally carry blood back toward the heart. Venous stasis can occur in any vein in the body but it is most commonly observed in the legs. Symptoms include a sense of heaviness, aching, night cramps, pain, tiredness, and paresthesias in the legs.
The use of compressive stocking helps venous return but it's not enough to solve the problem.
Aching, muscle stress, tingling can occur after compressive stocking use. Moreover compressive stocking therapy therapy is not comfortable during the summer.

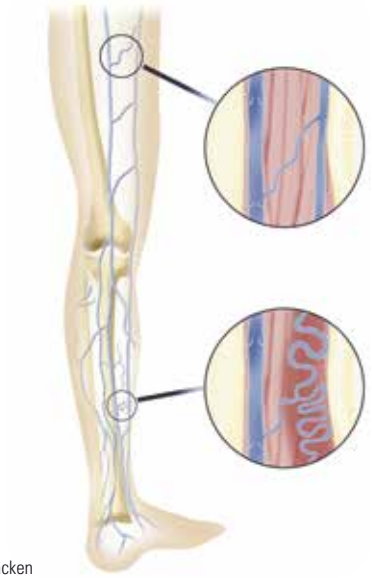
MIO-VEIN is able to stimulate calf muscle and in this way helps the correct venous circulation.
It represents an important home therapy support for venous diseases treatment.
MIO-VEIN can be used not only to help the correct venous circulation but also to prevent venous insufficiency and deep venous thrombosis.

Main treatments:
- Lower limbs oedemas
- Varicose vein
- Post-phlebitic syndrome
- Post-thrombotic syndrome
- Pregnancy related venous disorders
- Venous ulcers
- Leg itch after compressive stocking use



Venous return is encouraged by walking thanks to muscle pump action that moves up (back to the heart) blood flow. This happens in normal conditions when veins have health valves and walls.

As veins walls slacken and valves don't work correctly, blood flow go slow and stop (venous stasis). This condition can provoke venous circulation inversion.



MIO-VEIN stimulates calf muscle pump that promotes the compression of superficial and deep veins.
As a consequence blood reaches easily the heart.

IONOPHORESIS

Ionophoresis is an electro-therapy technique that exploits direct current to introduce medication into the painful area or the contracted zone. As the current is given off the medication is carried from one pole to the other and passes through the area affected by the disorder, releasing its active ingredient which acts with its typical physicalchemical properties.
There are two advantages with this sort of treatment: there is no need to take medication orally, and secondly the medication acts directly on the painful area (algia) caused by arthritis, arthrosis, sciatica, lumbago, cervical pains, torn muscles, etc.
IPP: ionophoresis is used successfully in treating disorders with the male genital apparatus, for example IPP (Induratio Penis Plastica) or La Peyronie's disease.

FES (functional electrical stimulation)

FES electrotherapy can be used for the treatment of male and female incontinence problems. Suitably therapy can stimulate the walls of the pelvic muscles, which control the bladder, toning and strengthening them: in this way muscle control is increased and problems of an irritable bladder are reduced.
Special medical probes are used (vaginal for urinary incontinence in women, anal for faecal incontinence in men and women) which transmit weak impulses that are generated by the device to the pelvic or sphincter muscles, causing them to contract and regain tone and strength.

FES in treating female sexual problems

Sexual pain is a very widespread problem in gynaecology. Given the important role that FES plays in re-educating and rehabilitating the muscular functions of the pelvic floor, the same technique can also be proposed in treating painful sexual problems in women.

17-Periarthritis	04-2 second ems slope	
18-Heaviness in legs	05-3 second ems slope	

* These programs allow 6 different settings (man-woman, upper limbs, trunk, lower limbs)

T-ONE MEDI PRO is a real portable computer.
It autonomously generatesTENS and muscular rehabilitation programs with no need for connecting to a computer.
Microtechnology to serve the professionals.
Settable parameters:
- Program time: 1-60 minutes
- Impulse amplitude: 20-450 microseconds
- Frequency: 1-120 Hz
- Impulse ramp: 1-2-3 seconds

LOW FREQUENCY MAGNETOTHERAPY

Low frequency magnetotherapy, also known as electromagnetotherapy or PEMF (pulsed electromagnetic fields) is characterized by an high magnetic field intensity (from 20 Gauss and over) and a very low frequency (up to 150 Hz). Magnetic fields produce different type of therapeutic effects on the biological membranes: antiphlogistic, antiedemigin and stimulating of tissue reparation.

In general magnetotherapy guarantees a biostimulation in order to recover the physiological functions of the cells. Low frequency and high intensity magnetotherapy is particularly indicated to treat bone calcification and in pain treatment, and generally in treating the soft tissues.

This technique helps the single cell to recover the right balance; therefore it is very useful in a wide range of cases:arthritis, arthrosis, muscular and articular pains, epicondylitis, intercostal contusions, scapulohumeral periarthritis, fractures, osteoporosis, osteonecrosis.

Calcification retard

Low frequency magnetotherapy is particularly indicated for all those people who suffer from calcification retard due to traumas, post-operation recovery after surgery to mend fractures or implant prostheses, and for people who suffer from osteoporosis.

Therefore this treatment is often suggested for elderly patients or women in the post-menopause stage, where there are often cases of osteopenia (reduction of the bone mass).

MAGNETOTHERAPY TREATMENT

1. Consult your doctor to determine the pathology
2. Daily treatments (at least 2-3 hours)
3. If necessary repeat the treatment during the year (for example in case of arthrosis, arthritis, osteoporosis, articular pain).

For further information please visit our website www.itechmedicaldivision.com.

MAG 700

11 PROGRAMS

It represents the per fect synthesis between performances and price. MAG700 is a magnetotherapy device with 1 channel and particularly indicated for osteoarticular pathologies treatment. Maximum magnetic field intensity up to 70 Gauss.

MAIN FEATURES:

- Magnetotherapy device with magnetic field intensity up to 70 Gauss
- Automatic recognition for disconnected cable
- 11 presetted programs
- Therapy time adjustable up to 24 hours and 59 minutes
- Magnetic field intensity adjustable with 10 Gauss step
- Medical device CE0476

programmi

01-Osteoarthritis	07-Anti-inflammatory
02-Arthritis	08-Autoscan
03-Osteoporosis	09-5 Hz Program
04-Fractures	10-10 Hz Program
05-Articular pain	11-20 Hz Program
06-Muscle pain	

MAG 2000

8 019781 472038

35 PROGRAMS

High per formances and easy to use magnetotherapy device with innovative design: typical Italian style. MAG2000 represents a great efficient device in magnetotherapy treatment and it's able to generate up to 300 Gauss on 2 channels.

MAIN FEATURES:

- Magnetotherapy device with magnetic field intensity up to 150 Gauss for single channel
- Automatic recognition for disconnected cable
- 20 presetted programs
- 14 programs identified by the working frequency (suggested by the doctor)
- 1 autoscan program for complexed pathologies
- Therapy time adjustable up to 24 hours and 59 minutes
- Magnetic field intensity adjustable with 5 Gauss step
- Medical device CE0476

programs

01-Osteoporosis	11-Intercostal contusions	21-Program 1 Hz	31-Program 70 Hz

CV2S2000
Professional solenoids couple for high intensity therapy for MAG2000 and MAG2000 Plus models

8 019781 472076

CUS2000
Single case for professional solenoid with a diameter of 11 cm

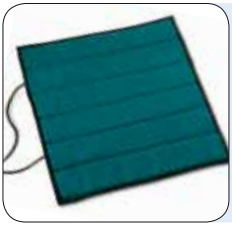
8 019781 472083

F3S2000
Elastic therapeutic belt + cable with 3 solenoids for low frequency magnetotherapy for MAG2000 and MAG2000 Plus models

8 019781 472052

F0S2000
Elastic therapeutic belt for low frequency magnetotherapy (not included cable with 3 solenoids)

8 019781 472069



TAP2000
40x40 cm therapeutic carpet equipped with 2 cables and 3 solenoids each for MAG2000 and MAG2000 Plus models

8 019781 472090

F2S700
Elastic therapeutic belt + cable with 2 solenoids (not inspectionable) for low frequency magnetotherapy for MAG700

8 019781 472212

OSTEOMAT

8 019781 472236

OSTEOMAT is the new mattress for low frequency magnetotherapy treatments. This mattress has been realized to meet two important requirements: the longed therapy time and the need of whole body treatment.
Low frequency magnetotherapy is particularly indicated in stimulation of fractures repair and to delay bone density reduction caused by osteoporosis. Osteoporosis is an increasing social phenomenon and it needs treatment of whole skeletal architecture.
Concerning this purpose the mattress allows the whole body treatment.

MAIN FEATURES:
- single sector dimensions: 40x65 cm;
- total mattress dimensions: 65x160 cm;
- 2 active sectors (3 solenoids for each sector, totally 6 solenoids)
- 2 passive sectors (without solenoids);
- 2 cables;
- suitable for MAG2000 and MAG2000 PLUS models

The mattress Osteomat is composed of 4 stackable sectors (2 active and 2 passive) linked with velcro straps in the horizontal dimension of each sector. In this way it's possible to change each sector position in order to treat a specific area.
The two active sectors has 3 solenoids each one (totally 6 solenoids) and represent the therapeutic sectors; the two passive sectors allow to create a planar surface where patient can lie down.

HIGH FREQUENCY MAGNETOTHERAPY

High frequency magnetotherapy, also known as high frequency electromagnetotherapy or PEMF (pulsed electromagnetic fields) is based on emitting radio waves with a frequency between 18 and 900 MHz in short pulses, and the frequency can be regulated.
High frequency and low intensity (measured in milliwatts) is particularly indicated in pain therapy, healing, oedemas and generally for treating disorders of the soft tissues.
It can also be used for calcification retard, but requires more treatments than low frequency magnetotherapy.

Difference between HIGH FREQUENCY MAGNETOTHERAPY and TENS

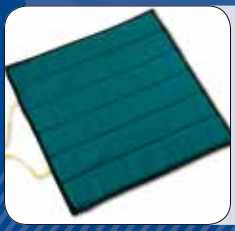
TENS acts on the pain with a prevailing action on the nervous system and, therefore, on the painful symptom.
High frequency magnetotherapy not only acts on the nerve ends, but acts more effectively on the cellular structure, helping to restore the normal physiological conditions.

Studies and clinical experience have confirmed electromagnetic wave therapy is totally harmless and with no undesirable side-effects (the or rather use under strict medical supervision, are limited to wearers of pacemakers, pregnant women, patients with serious cardiac/neurological problems or patients with tumours).
For these reasons, PEMF has been used in a wide range of disorders with very satisfactory results, both in hospitals and outpatients' surgeries.

HIGH FREQUENCY MAGNETOTHERAPY ACCESSORIES

FTI1000
Elastic therapeutic belt for high frequency magnetotherapy (mod. MAG1000)

8 019781 471444



TAP-HF
High frequency magnetotherapy therapeutic carpet 40x40 cm for MAG1000 model.

8 019781 471642

MAG 1000

8 019781 471437

20 PROGRAMS

with adjustable frequency from 8 to 640 Hz
and therapy time up to 24 hours.

Ideal for treating disorders of the soft tissues, such as muscles, tendons, skin and nerves (tendinitis, phlebitis, sciatica, oedemas, etc.). It is also indicated for calcification retards.

MAIN FEATURES:
- On-line guide on backlight display for fast instructions;
- 2 belts connections (second belt optional);
- Adjustable intensity on 3 levels;
- Wrong belt connection indicator;
- Internal Ni-Mh rechargeable battery pack with new LL technology (long lasting)
- Medical device CE0476

Second belt optional

programs

01-8 Hz 45 min	08-32 Hz 4 hours	15-160 Hz 2 hours
02-8 Hz 2 hours	09-48 Hz 2 hours	16-160 Hz 4 hours

07-32 Hz 2 hours	14-80 Hz 4 hours	

Portable device for high frequency magnetotherapy.

High efficiency rechargeable battery.

ULTRASOUND THERAPY

In therapy, ultrasounds are created artificially by exploiting the properties of certain mineral crystals that dilate and compress when they are subjected to the action of an electric field. Ultrasound irradiation generates vibrations and, therefore, micro-massage that is very intense, acting deep down in the tissues. As these vibrations impact and friction with the cellular and intracellular structures they generate heat. Interaction of the ultrasounds with the biological tissues produced mechanical, thermal, chemical and antalgic effects. Ultrasound therapy is indicated for antalgic treatments, for relaxing contracted muscles, fibrotic and trophic actions. It is particularly indicated to treat problems of the locomotor apparatus, where antalgic effects are needed, in sciatica and neuritis generally, in periarticular calcification, Duplay's disease, Dupytren's disease, organised hematomas and scar tissue, tendinitis, muscular contractions. In scapulohumeral periarthritis, ultrasound therapy can disgregate the calcification and help absorption of the calcium salt deposits. It is also useful to improve the effect of kinesitherapy.

APPLICATIONS IN BEAUTY TREATMENT

Ultrasounds can be used effectively in beauty treatments for cellulite, aiding local circulation and reducing the "orange peel" effect.
It the absorption of active ingredients, such as liposoluble vitamins (e.g. vitamins A and E) and hydrosoluble agents through the skin, relaxing the tissues with good results in smoothing out wrinkles. Very good results have been obtained in activating anti-inflammatory processes, regenerating the tissues in cases of acne and foruncolosis, in mobilising the fats and restoring tropism in the cellular tissues and tissue metabolism, with positive effects on vascularisation and lymphatic drainage.

SONICSTIM

8 019781 472311

15 SETTED PROGRAMS
1 MHz ultrasound program
7 ultrasound+electrotherapy combined programs
7 electrotherapy programs

Innovative ultrasound device, with 3 devices in one:
- Just ultrasound
- Just electrotherapy
- Combined ultrasound and electro-stimulation therapy

Combined programs (ultrasound + tens) are particularly indicated for the treatment of inflammatory states.
Tens reduces inflammation and ultrasound produces a thermal and vasodilatation effect.

Ultrasound head no to be use for immersion treatment.

CONTENTS:
- Device
- Medical power supply
- Ultrasound gel
- Single plug cable for combined therapy
- Double plug cable for electrotherapy
- Electrodes
- User and positions manual
- Carriage bag

MAIN FEATURES:
- 1MHz ultrasound, maximum output power 4W
- Maximum intensity 1W/cm^2
- Maximum electrotherapy intensity output 80Vpp
- TENS programs (frequency 2÷150Hz, impulse width 50÷250μs)
- Medical device CE0476
- 5 cmq treatment head

MIO SONIC

8 019781 472175

9 ADJUSTABLE PROGRAMS

more than 50 applications:
pain therapy, lymphedemas, contractures, muscular rigidities, aesthetic cavitation

High per formance, easy to use and handy device. It is suggested not only for pain therapy but also for fitness and aesthetic applications.

CONTENTS:
- Portable device
- Medical power supply
- Ultrasound gel
- User and positions manual

MAIN FEATURES:
- 1 MHz ultrasound
- Maximum output power 4,8W,
- Collimated ultrasound beam for an optimal penetration beam;
- 3 ultrasound beam intensity levels
- Medical device CE0476
- Direct contact device (not suitable for water immersion)

ESOGEN THERMOTHERAPY

The main effect of infrared is the thermal effect on the treatment zone: the heat increases body temperature and this causes the metabolism tissues increase, capillary vasodilatation and muscular relaxation.

Infrared antalgic effect is due to algogenic substances removal from pathological tissues and to contracted muscles relaxation. Infrared therapy is used to cure muscular contractures, cervical and lumbar osteoarthritis and bed sores. Moreover infrared rays are very efficacious as training before kinesitherapy.

INFRARED WHF-312

8 019781 471871

INFRARED LAMP

Medical device particularly indicated for treatment of articular pains and for stimulation of blood circulation as well as tissues oxygenation.

MAIN FEATURES:

- Adjustable Timer 10-60 minutes or continuous
- 250 Watt maximum output power (hot light bulb)
- Adjustable Height
- Weight (Main Body) 5 Kg
- Size 1600x500mm
- Medical Device CE 1023

PARAFFIN BATH

Paraffin is a wax-like substance that is solid at room temperature and at temperatures higher than 50°C begins to melt, converting to liquid form. Paraffin was first used for medical and therapeutic purposes in 1915 for treating patients suffering from arthritis.

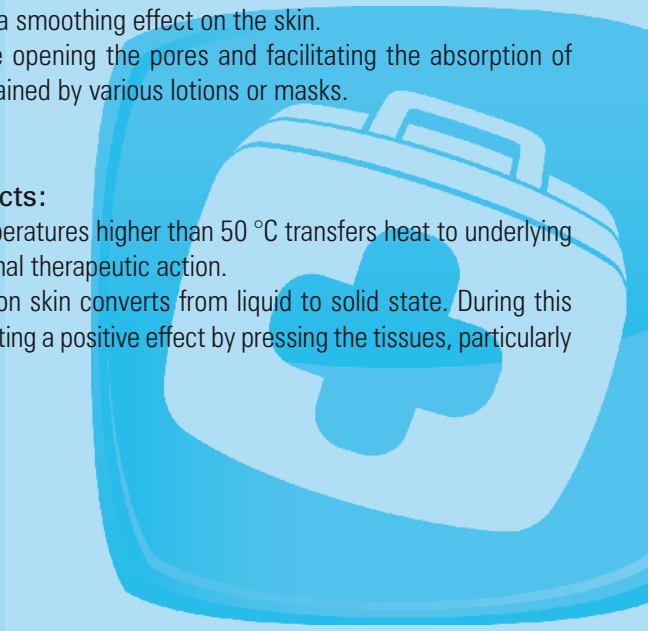
Actually, paraffin has the ability to retain a high amount of heat and release it gradually afterwards. Therefore, hot paraffin relieves muscles cramps, promotes blood circulation and facilitates optimal absorption of topical products through the skin.

The areas that are treated most frequently with paraffin are the joints (of hands, feet, knees and ankles). The main therapeutic indications are arthrosis, rheumatoid arthritis (in subacute or chronic stage) as well as limb stiffness, swelling.

Paraffin is very efficient in preparing the manoeuvres for restoring and treating limbs following immobilization in plaster and posttraumatic stiffness.

The use of paraffin for beauty treatments is more recent. Paraffin has proven to have not only a relief effect on painful joints but also a smoothing effect on the skin.

Actually, paraffin moistures skin while opening the pores and facilitating the absorption of active or regenerative ingredients contained by various lotions or masks.



Biological and therapeutic effects:

- Thermal effect: paraffin used at temperatures higher than 50 °C transfers heat to underlying tissues, promoting an exogenous thermal therapeutic action.
- Mechanical effect: paraffin applied on skin converts from liquid to solid state. During this transformation, its volume reduces exerting a positive effect by pressing the tissues, particularly an anti-swelling effect.

WPB-202

8 019781 530011

Professional device for paraffin baths suitable for hands, feet and the whole body. Paraffin wax is particularly indicated for arthrosis, rheumatoid arthritis and post- traumatic edemas treatments thanks to its effective thermal and mechanical action.
Paraffin is widely used in cosmetic treatments to hydrate skin and to promote lotion and face mask absorption.

CONTENTS:
- 453 gr x 4 paraffin wax packages
- 1 hand cover
- 1 foot cover (up to size 45)
- Single-use Vinyl Pack
- Safety plate

MAIN FEATURES:
- Power supply 220-240 VAC, 50-60 Hz
- Power consumption 180 W
- 4 temperature levels
- Knob for temperature selection
- Led indicator
- Dimensions 410 x 245 x 250 mm
- Weight 2,3 Kg
- Medical device CE0476

Q6000 | Plus 6 chambers

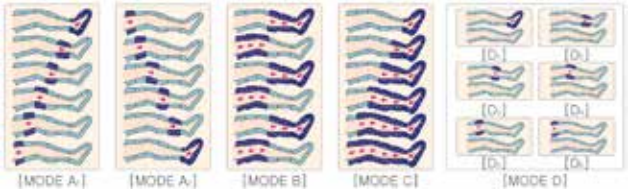
8 019781 472441

Power Q6000 Plus is the new pressotherapy system for professional treatment.
It promotes the excess interstitial fluids elimination and consequently the correct function of the lymphatic system by continuously repeating swelling and contraction.

MAIN FEATURES:
- Graphic display
- 2 output channels (up to 3 connectable applicators)
- Adjustable pressure: 10÷240 mmHg ±10%
- Adjustable time: 0÷99 minutes
- 5 programs
- 8 air speed levels
- Class IIa medical device (CE1023 in compliance with MDD 93/42/EEC)

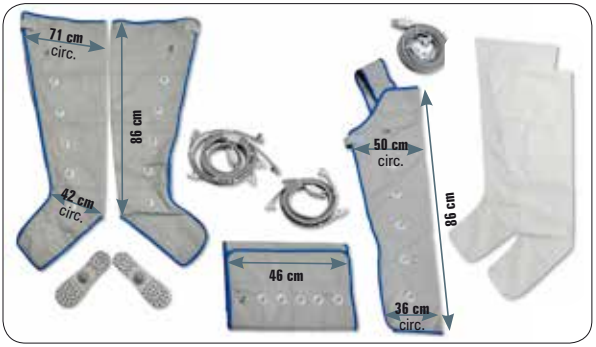
- **With Power Q-6000 Plus is possible to customize each treatment according to individual needs.**
- **Outputs: it's possible to connect up to 3 applicators simultaneously. Treatment of abdominal area and lower limbs in a single session!**

5 SETTING MODES



CONTENTS:
Power Q6000 Plus including machine body, double leggings with 6 compression chambers each, 2 pressure plantars, double TNT leggings, abdominal band with 6 compression chambers, armband with 6 compression chambers and connection tubes (1 and 2 derivations).

Moreover extensions for wide legs are available as accessories.



bracciale: destro o sinistro su richiesta

R-LEG6-P Right legging with 6 compression chambers for Power Q6000 Plus model (length 86 cm; thigh circumference 71 cm; ankle circumference 42 cm)

8 019781 472458

L-LEG6-P Left legging with 6 compression chambers for Power Q6000 Plus model (length 86 cm; thigh circumference 71 cm; ankle circumference 42 cm)

8 019781 472465

XL-LEG6-P 2 extensions for wide legs for R-LEG6-P and L-LEG6-P

8 019781 472472

LEG-CON6 6 tubes connector with 12 terminals for simultaneous therapy on both legs or both arms

8 019781 471819

ABD6 Abdominal band with 6 compression chambers for Power Q6000 Plus model

8 019781 471826

ABD-CON6 6 tubes connector for abdominal band

8 019781 471833

ARM6 Armband with 6 compression chambers for Power Q6000 Plus model

8 019781 471840

ARM-CON6 6 tubes connector for armband or legging

8 019781 471857

POWER-Q1000 Premium | 4 chambers

Highly performing pressotherapy device with 4 compression chambers ideal for home treatments.

MAIN FEATURES:

- LCD graphic display
- Adjustable pressure: 0÷240 mmHg
- Adjustable time: 5÷99 minutes
- 6 programs
- 9 air speed levels
- 6 time intervals
- Pressure can be adjusted for each compression chamber
- Medical device CE1023

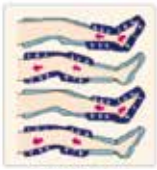
• Adjustable pressure for each compression chamber
• 6 setting modes of air chambers in accordin to therapeutic needs
• Parameters memorization

Connector for simultaneous therapy on both legs and abdominal band.

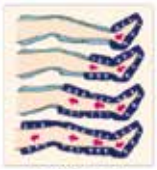
With **Power Q1000 Premium** you can select 6 setting modes of air chambers accordin to patient therapeutic needs.

MODE A1: air flows in the first chamber (lower limb) according to adjusted pressure and sequentially in the other chambers in a distal-proximal way.

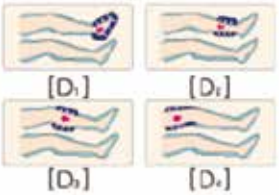
MODE A2: air flows in the fourth chamber (upper limb) according to adjusted pressure and sequentially in the other chambers in a distal-proximal way.



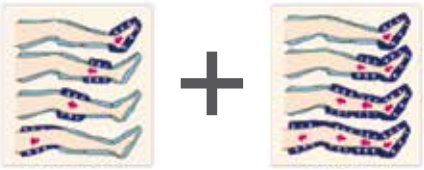
MODE B: air flows in the first two chambers. When adjusted pressure is reached air flows in the last two chambers (distal-proximal way).



MODE C: air flows in the first chamber (lower limb) according to adjusted pressure and sequentially in the other chambers (distal-proximal way) by keeping swelled up the previous chamber every time.



MODE D (1, 2, 3, 4): air flows only in the selected compression chamber (mode D1 chamber 1; mode D2 chamber 2; mode D3 chamber 3; mode D4 chamber 4).



MODE E: the machine runs two cycles in sequence (mode A1 + mode C).

ADJUSTABLE PARAMETERS FOR EACH PROGRAM:

- Air speed level: 5, 7, 9, 11, 13, 15, 17, 19, 21 sec
- Interval time level: 0, 5, 10, 15, 20, 25, 30 sec
- Therapy time: 5÷99 minutes
- Adjustable pressure for each compression chamber: 0÷240 mmHg

Main applications:

- Lymphedema
- Hematoma
- Passive compression for venous disorders
- Rheumatoid arthritis
- Arm drainage after mastectomy
- Treating hematomas after surgeries
- Anti-cellulite treatment in the initial stages
- Post operation prophylaxis in venous thrombosis surgery

ACCESSORIES SIZES

Armband: right or left on demand - abdominal band: small or large on demand.

LYMPHOPRESS 4 | 4 chambers

P ressotherapy device with 4 compression chambers indicated for home treatment. Lymphopress 4 promotes the blood circulation and the metabolism by the repeated inflation/ deflation massage of air cuff.

MAIN FEATURES:
- Adjustable pressure: 20÷300 mmHg ± 10%
- Adjustable therapy time: 0÷30 minutes
- Power consumption: 25 W
- Power supply: 220-240 VAC, 50-60 Hz
- Current: 0,2 A
- Weight: 2 Kg
- IIa class medical device (CE0476 in compliance with MDD 93/42/EEC)

Connector for simultaneous therapy on both legs and abdominal band!!

ACCESSORIES SIZES

Armband: right or left on demand - abdominal band: small or large on demand

Which are pressotherapy effects on lymphatic drainage?

First pressotherapy increases venous and lymphatic flow with the consequent release of vasodilatator, anti-thrombotic and pro-fibrinolytic substances. Moreover pressotherapy increases interstitial pressure and this promotes capillary reabsorption and reduces interstitial lymphatic load.
These actions increase lymphatic capacity with the consequent oedema reduction.

Main applications:
- Limphedema
- Hematomas
- Venous stasis
- Anti-cellulite treatment in the initial stages
- Arm drainage after mastectomy
- Tired legs
- Recovering muscular tone in immobilized or disabled patients (in this case, pressotherapy replaces manual massages for trophic treatment).

LymphoPress 4 promotes limb blood flow and increases muscle tissues pressure that is indispensable for the treatment of lower and upper limbs pathologies (for example oedema).

Lymphopress 4 and POWER Q1000 Premium can be supplied in 5 different versions according to the therapeutic needs.

TOT

Compressive limb therapy system comprising machine body, double leggings with 4 compression chambers, 2 pressure plantars, abdominal band, armband, connector for simultaneous therapy on both legs and abdominal band and connection tubes.
